Smoke Alarms and CO Detectors

While fire alarm systems and sprinkler systems protect you at both work and play, we want to make sure you are protected at home as well. Smoke alarms in your home are critical safety measures that provide incomparable protection by warning you early enough to take the necessary precautions. As part of Fire Prevention Month, we would like to present the following smoke alarm tips:

- Smoke alarms should be installed on every level of your home, especially near kitchen areas and hallways. They should be also installed in every bedroom.
- Based on the size of your home, you may need to install multiple smoke alarms on every floor.
- Test all smoke alarms at least once a month. You can do this yourself by pressing the test button to make sure the alarm works. If your smoke alarms are wired together, holding the test button on one alarm will test all the smoke alarms at one time.
- Replace batteries in smoke alarms twice a year. A good reminder is to change the batteries when the time changes in the spring and fall. This includes those alarms wired directly into your ceiling. These should also be changed as the battery will operate the smoke alarm during a power outage.
- Replace smoke alarms every 8-10 years.
MARK YOUR CALENDERS
